

Fact Sheet

Corporate Headquarters 9225 Leslie Street, Unit 7
Richmond Hill, ON, Canada L4B 3H6

Company **Visual Defence** prides itself on mastering the “Art of Integration”. We tailor advanced security solutions for governments, airports, transit and commercial clients around the world. Leveraging 3C®, our proven Security Management Platform, Visual Defence integrates Video, VoIP, IP Access Control, and Situational Awareness applications into a single unified solution that meets exact business objectives. By turning functionality and interoperability requirements into intelligent, scalable and easy-to-manage solutions that provide end-users with the security insight they need we help organizations improve operations and effectively prevent and mitigate risk.

Solutions Visual Defence offers a number of software platforms that to meet specific customer requirements:

- **Command and Control Center (3C):** The 3C is a common management platform that provides a complete customized solution allowing a single point of management for video, audio and alarms generated from numerous subsystems. The unique flow chart tool of the 3C allows customers to incorporate operator response instructions based on specific procedures and operating policies.
- **Virtual Matrix System (VMS):** VMS is a comprehensive management application for live and recorded video control and monitoring. VMS integrates analog systems with IP technology and uses open platforms to connect with cameras, video recorders, encoders, etc from multiple manufacturers to offer full flexibility in system design.
- **Digital Video Storage System (DVSS):** DVSS is a comprehensive digital and audio storage system that provides a single system to store, query, review and manage large amounts of recorded and live video and audio content from various sources.
- **Mobile Digital Video Storage System (DVSSm):** The Mobile DVSS is a full featured Digital Video Recorder designed for mobile architecture.
- **Intercom Management System (IMS):** The IMS is a standards-based VoIP Intercom solution, working with SIP protocols. IMS integrates voice, image and data into one cohesive solution and integrates seamlessly with both 3C and VMS.
- **VDEye:** The Visual Defence Eye is a designed for streaming video over low bandwidths to allow the ability to access video data on a wide variety of devices including laptops, tablet PCs, rugged PDAs, stationary PCs as well as a range of cellular phones.
- **Door Management System (DMS):** Visual Defence’s Door Management System is a state of the art access control system offering unparalleled functionality and application expandability. The system integrates full video, audio, video analytics and access control into a single device which minimizes the costs of installation and configuration.
- **mTouch** A touch screen CCTV surveillance camera management system capable of controlling up to 64 cameras. Featuring secure login, custom event triggers, built-in safeguard and a variety of customizable options, the system allows for the viewing of multiple locations and vantage points from a single position.
